### DETAILED ACTION

An examination of this application reveals that applicant is unfamiliar with patent prosecution procedure. While an inventor may prosecute the application, lack of skill in this field usually acts as a liability in affording the maximum protection for the invention disclosed. Applicant is advised to secure the services of a registered patent attorney or agent to prosecute the application, since the value of a patent is largely dependent upon skilled preparation and prosecution. The Office cannot aid in selecting an attorney or agent.

Applicant is advised of the availability of the publication "Attorneys and Agents Registered to Practice Before the U.S. Patent and Trademark Office." This publication is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

### *Drawings*

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the jack runner of claim 5, the pipe support of claim 17, and the spring loaded catch of 16 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

***Claim Objections***

Claim 8 objected to because of the following informalities: the phrase "wherein the first side consist" should be read "consists". Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-20 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Specifically, it is understood that the jack accessory is adapted to fit about a standard jack stem found in the prior art. However, once the accessory is mounted, how does it operate? How is the accessory utilized to lift an object? Figure 2, illustrates the accessory, but it is unclear how it cooperates with the prior art jack to perform a lifting function?

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3723

Claims 1-20, as best as understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Dube.

Dube, in Figure 1, discloses a lift column 14, a lift column socket 20, and a tongue in Figure 2, at 38. The lift socket 20 is secured about a rectangular lift column with catching means comprising teeth 16. Furthermore, the tongue is disposed in the socket assembly. Figure 6 illustrates that the apparatus is adapted to fit about a jack stem.

Next, in Figures 2, 3B, and 6, first, second, and third catch means are illustrated with tongues 40. Moreover, Figure 2, illustrates a catch hole 36.

### **Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Morgan, McIntosh, Simko, and Cardona disclose lifting devices.
